

CORPORATE PROFILE

DBP Data Center, Inc. (DCI) is a wholly-owned subsidiary of the Development Bank of the Philippines (DBP), the country's pre-eminent development bank. Founded in 1982, DCI has its roots as DBP's data center. For 25 years of committed IT service, it has been operating and maintaining the bank's various IT systems.

From its humble beginnings as DBP's data center, DCI has become the only Government Owned and Controlled Corporation (GOCC) that provides IT Project Management Services and Consultancy Services, IT Procurement and BAC Services, Maintenance Services, Managed Services, ISSP Formulation and Implementation, Staff Supplementation, and IT Trainings under its Project Management Office. DCI provides its expertise in Information Technology not only to DBP but to the government and private sectors as well.

PROJECT MANAGEMENT OFFICE

PROJECT MANAGEMENT

DCI can provide project management services with a team that can handle virtually any IT project from its initiation to its completion. We help our clients oversee and monitor the project closely by directing the short and long term planning, controlling and monitoring of the project components, providing status reports, and ensuring completion of the project.

IT PROCUREMENT & BAC SERVICES

DCI recognizes the fact that IT is not something that is easily understood because of the fast and exponential advances in the industry. One must be constantly immersed in IT just to keep in pace with these advances. As information in the IT industry progress quickly, simply knowing what to procure is a challenge by itself.

Since DCI's core competence is IT, the company naturally becomes the eyes and ears of the company or government agency in the industry.

MAINTENANCE SERVICES and MANAGED SERVICES

DCI understands the difficulty of the government in hiring and retaining good IT people. Moreover, maintenance of the system, hardware and software is an integral part of sustaining an IT system. DCI can provide the IT staffing requirements of the agency to maintain its systems.

DCI can provide managed services and collocation facilities for servers. Without having to worry too much about on-site maintenance, the agency can be more focused on your core business processes. Since maintenance cost can be estimated in a monthly or yearly basis, it can be included in the company's operational expense (OpEx).

ISSP FORMULATION and IMPLEMENTATION

An Information Systems Strategic Plan (ISSP) serves as the blueprint of the company's IT directions and is intended to rationalize the purchase of Information Technology (IT) resources of a government agency. DCI provides trainings, consultancy, staff supplementation, studies/analyses and workshop to develop and implement an ISSP for its clients.

IT TRAININGS

DCI conducts IT trainings for management and staff to provide them with the basic knowledge, tools and skills in information technology. The trainings gives our clients information on the latest trends and developments in IT and other related technologies to enable them to analyze, formulate and implement strategic, tactical and operational information technologies.

Being an IT company has allowed DCI to be in the forefront of IT technology through its business partners. DCI extends its wealth of experience and information on the latest developments in the industry to our valued clients.
